Art Unit: 1742

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claim1-62 are rejected under 35 U.S.C. 103(a) as being unpatentable over West et al.

West et al. disclose at col. 3, lines 33-50) a frangible projectile comprising:

a high density powder selected from the group consisting of tungsten, bismuth, ceramic, stainless steel, copper, bronze or other high density metal powders, their mixtures and alloys; and

a polyester matrix.

West further disclose wherein the projectile is part of a ammunition comprising known cartridge components comprising firing pin, case, primer, and propellant (col. 3, lines 24-33).

As stated, West et al. discloses wherein mixture can comprise mixtures and alloys of his disclosed metals and other known high density metal powders, ferrotungsten being a known equivalent of tungsten in lead free projectile compositions.

Furthermore, West et al. discloses selecting more than one of his high density metals, such that a selection of bronze would meet the limitation of a Sn containing metal, when further combined with tungsten or ferrotungsten, would provide for a projectile of W/Sn or FeW/Sn in a polymer matrix.
